Learning aims and outcomes:

Surgical Removal of Wisdom Teeth

- Understand the indications for surgical removal of wisdom teeth according to the Latest RCSEng guidelines
- To be able to recognise what modality of xray is required for assessment of wisdom teeth and how to interpret them.
- To understand the various complications that arise following extraction of wisdom teeth and how to deal with them

Management of the Medically Compromised Patient.

- Recap on most common medical conditions and how they affect patient management
- Discussion of various medications that patients take for those medical conditions and how they affect your management in a dental practice.

Management of Oro-facial Infections

- Understand the classification of orofacial infections
- To be able to recognise the path of infection spread
- Outline of management both medical and surgical
- When to refer

Oral Surgery: How, When and Where

- Discuss common complications in oral surgery
- Discuss how to avoid and manage these complications
- Discuss when to consider referral

Qualifies for 5 hours of ECPD following the GDC's development outcome C
